About the Colloquium:

The scientific temper is a way of scientifically perceiving things around us. It's a way of life which involves scientific inquiry into the things and involves questioning, observing, testing, hypothesizing, analysis and communicating. Article 51 A of our constitution deals with fundamental duties. There is one duty that is unique to India under Article 51 A(h) that encourages the citizens to develop the scientific temper, humanism and the spirit of inquiry and reform. Scientific temper challenges the fear of unknown. It is very important to instill this aptitude amongst the youth for the development of our Nation. Science involves a pursuit of knowledge regarding the inorganic world, or the organic world of life, or human behavior. There is a need to evolve and ingrain a temperament towards various dimensions of science. In these testing times when the world is going through this turmoil of Covid-19, how important it has become to realize the importance of developing scientific temper. This

Colloquium is a platform to bring forth various views and knowledge of the experts on developing scientific temper, humanism and the spirit of inquiry and reform.
